                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 19, 19 Sequence 3, Al Sequence 3, Al Sequence 3, Al Sequence 3, Al Sequence 3, Al

Application US/08175096

Patent No. 5691167

GENERAL INFORMATION:

APPLICANT: Singh, Mohan Bir

APPLICANT: Knox, Robert Bruce

TITLE OF INVENTION: ALLERGENIC PROTEINS AND PEPTIDES FROM

TITLE OF INVENTION: JOHNSON GRASS POLLEN

NUMBER OF SEQUENCES: 21

CORRESPONDENCE ADDRESS:

ADDRESSE: LAHIVE & COCKFIELD

STREET: 60 State Street, Suite 510

STATE: MA

Patent No. 6441157
GENERAL INFORMATION:
APPLICANT: Smith, Penelope; and
APPLICANT: Knox, Robert Bruce
TITLE OF INVENTION: Protein Allergens of the Species
TITLE OF INVENTION: Cynodon Dactylon
NUMBER OF SEQUENCES: 45

The present invention describes an isolated nucleic acid molecule (I)

comprising a polymucleotide or its conservatively modified variant having
a sequence of 291 bp (SEQ ID NO:1 (SI), ADJ65065). Also described: (I) a
recombinant expression cassette (II) comprising (II); (2) a vector (III)

comprising (II); (3) a host cell comprising (III); (4) a group 2/3
allergen encoding a polypeptide comprising (III); (4) a group 2/3
allergen encoding a polypeptide comprising (III); (4) a group 2/3
allergen encoding a polypeptide comprising (III); (4) a group 2/3
allergen encoding a polypeptide comprising (III); (1) a method of modifying
ccl 100 amino acids given in SEQ ID NO:2, or SEQ ID NO:8 to 18 (ADJ65066, or
ADJ65072 to ADJ65082); (5) an isolated polypeptide (IV) encoded by (I);
(6) a mantibody that selectively binds to (IV); (7) a method of modifying
ccl1 walls in the tissues of a transgenic plant, comprising introducing
into a plant an expression cassette comprising a promoter active in cells
of plants operably linked to a group 2/3 allergen to plant
ccl1 comprising a polypeptide having expansin activity; (10) a transgenic plant
ccl1 comprising a nucleic acid that comprises SI and that
ccl1 comprising a nucleic acid that comprises SI and that
ccl1 comprising a nucleic acid that comprises SI and that
ccl1 comprising a nucleic acid that comprises SI and that

Ryegrass Lol p 3 allergen modified variant cDNA SEQ ID NO:3.

allergen; plant; expansin; transgenic plant; plant growth regulant; gene therapy; cell wall; growth; flexibility; tissue mechanical strength; ryegrass; Lol p 3; modified; variant; gene; ss.

Lolium perenne. Synthetic.

The present invention describes an isolated nucleic acid molecule (I) comprising a polynucleotide or its conservatively modified variant having comprising a polynucleotide or its conservatively modified variant having comprising (II); (2) a vector (III) are sequences of 591 bp (SEQ ID NO: 61); (2) a vector (III) comprising (III); (4) a group 2/3 alergen encoding a polypeptide comprising (III); (4) a group 2/3 alergen encoding a polypeptide comprising (III); (4) a group 2/3 alergen encoding a polypeptide comprising of (IV) encoded by (I); (6) am antibody that selectively binds to (IV) a method of modifying cell walls in the tissues of a transgenic plant, comprising introducing into a plant an expression cassette comprising a promoter active in cells of plants operably linked to a group 2/3 allergen polynucleotide which specifically hybridises to SI under stringent conditions; (8) a method of cell comprising a mucleic acid that comprises SI; (II) a transgenic plant comprising a nucleic acid that comprises SI; (II) a transgenic plant comprising an uncleic acid that comprises SI; (III) a transgenic plant conditions; and (12) seeds of the plant described above, which carry the polynucleotide which specifically hybridises to SI under stringent conditions; and (12) seeds of the plant described above, which carry the DNA can be used in gene therapy. The composition and methods of the present invention can be used in altering plant cell wall properties, or which may effect growth, flexability and mechanical strength in tissues con which may expressed. The present sequence represents a modified containt ryegrass LoI p 3 allergen cDNA sequence, which is used in the compassion. New isolated nucleic acid molecules encoding polypeptides having expansin activity, useful for altering plant cell wall properties to effect growth, flexibility and mechanical strength in tissues in which they are Disclosure, SEQ ID NO 3; 73pp; English. WPI; 2004-143737/14. Cosgrove D; expressed Li L,

The invention relates to isolated promoter sequences (ADW43400 and ADW43401) from the peremnial ryagrass pollen allergen Lol p 2 gene which are capable of modifying pollen-specific expression. The invention also relates to vectors comprising a Lol p 2 promoter sequence; chimeric genes comprising a Lol p 2 promoter operably linked to a second nucleic acid, particularly one which downregulates pollen allergen expression; and particularly one which downregulates pollen allergen expression; and containing them can be used to modify gene expression in pollen or to containing them can be used to modify gene expression in pollen or to containing them can be used to modify gene expression in pollen or to containing them can be used to modify gene expression in pollen or to containing them can be used to modify gene expression in pollen or to containing them can be used to modify gene expression of pollen allergen genes comprising containing them can be used to generate low allergy plants which a lot p 2 promoter sequence of pollen allergen genes (e.g., Lol p 1.cc to 1 p 2 antisens sequences) can be used to generate low allergy plants producing plants with reduced male fertility, or for restoring male fertility, in male-sterille plants. The present sequence represents a 3.3 to promoter region (ADW43400) and a 366 bp open reading frame encoding a 121 residue protein. This sequence comprising an approximately, 2.7 kb 5 to promoter region (ADW43400) and a 366 bp open reading frame encoding a 121 residue protein. This sequence was obtained from a 3.9 kb genomic clone contains of a Lambda-DASH Lolium perenne cv.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2933

                                                                                                                                                                                                                                                                                                                    The nucleotide sequence of the timothy grass allergen Phl pII. The gene encodes a protein of 122 a.a. including a 26 a.a. signal peptide sequence. This is the first complete recombinant allergen from the group II/III plant pollen allergens. The protein sequence was used to generate a series of synthetic B- and T-cell epitopes (AAR72414.45). The allergen or its epitopes can be used in the detection of either an allergy in a patient against the pHl pII allergen or a cellular reaction to the allergen. Mammalian pollen allergy may be treated using recombinant or synthetic Phl pII or at least one of its epitopes. (Updated on 25-MAR-2003 to correct PN field.)

```
The invention relates to novel abiotic stress responsive polynucleotides and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the responsiveness of a plant to an abiotic stress, such as cold stress, salt stress, osmotic stress or any of their combinations. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold stress, salt stress or osmotic stress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            315 Accaagercaacriccacerdaadarccrccaacaaaaacracerdeccregrafic 374

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at from sequence.html?DocID:2004014088. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant colerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, increased resistance to plant disease, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one cruess condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert of the plant can be used in the recombinant DNA construct of the
                                                                                                                                                                                                            recombinant DNA construct; physical array; plant breeding marker; cold tolerance, heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance; galactoremannan production; lignin production; plant growth regulator; yield; plant growth, plant development; seed oil; protein yield; protein content; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for improving yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1097 BP; 272 A; 290 C; 308 G; 227 T; 0 U; 0 Other;

of P. pratense exists as beta-expansin which is one of the components of the cell wall. Hyposensitising immuncherapy (STT) consists of a pharmaceutical composition, comprising the hyposlergenic variant, or a vaccine against the variant and is useful in the specific immuncherapy, prophylactic or therapeutic treatment of allergic diseases. These include bronchial asthma, allergic rhinitis, allergic dermatitis and allergic conjunctivitis. The sequence presented is the cDNA of the hypoallergenic variant of Phleum pratense, Phl p 1, which has had all the Lys residues, specified above, substituted by Ala

AAQ73599 is the PCR generated full length clone 20, which encodes Phl pI (AAR60706) a major protein allergen of Phleum pratense. Internal peptides (AAR60710-R60757) isolated from a ryegrass major protein antigen ryegrass pollen protein the treatment and diagnosis of sensitivity to ryegrass pollen protein (Lol pi), or pollen proteins that are immunologically related to Lol pi e.g. Dac gi, Phl pi and Poa pi. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                   AAQ73598 is the PCR generated full length clone 114, which encodes Poa [AAR60705) a major protein allergen of Poa pratensis. Internal peptides (AAR60710-R60757) isolated from a ryegrass major protein antigen (AAR60703) can be used in the treatment and diagnosis of sensitivity to ryegrass pollen protein [Lol pl], or pollen proteins that are immunologically related to Lol pl e.g. bac gl, phl pl and Poa pl. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                           Isolated peptide(s) of Lol or p I, major protein allergen of species Lolium perenne. - useful for diagnosis and treatment of sensitivity to rye-grass pollen allergen.

The invention relates to novel abiotic stress responsive polynucleotides and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides. The invention is useful in responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test of plant has been exposed to an abiotic stress condition. It is also useful to for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or cortholog to an abiotic stress responsive polynucleotide. The nucleic acid ortholog to an abiotic stress responsive polynucleotide. The nucleic acid cresponsiveness of a plant to an abiotic stress, such as cold stress, salt stress, osmotic stress or any of their combinations. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                 for altering the an abiotic stress such as cold
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CTCACCGGCCCAATGAACTTCCGCTTCCTCCAAGGCCGCCATGAAGAACGTCTTCGAC 237

The DNA can be used for diagnosing, treating and preventing allergy to Johnson grass pollen. See also AAQ65409-17. (Updated on 25-MAR-2003 to correct PN

The invention describes a recombinant DNA construct comprising a polymucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at from the US patent office at from sequence.html?DocID:2004034888. The polymucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme camputer conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, increased resistance to plant disease, for producing galactomannan, crecombination in plants, for increasing the rate of homologous recombination in plants, for increasing the rate of homologous crecombination in plants, for ingroving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert of the polymucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance; galactomannan production; lignin production; plant growth regulator; yield; plant growth; plant development; seed oil; protein yield;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for improving yield.

AAQ73597 is the PCR generated full length clone 106.5, which encodes Dac gI (AAR60704) a major protein allergen of Dactylis glomerata. Internal peptides (AAR60710-R60757) isolated from a ryegrass major protein antigen (AAR60703) can be used in the treatment and diagnosis of sensitivity to ryegrass pollen protein [Lol pI], or pollen proteins that are immunologically related to Lol pI e.g. Dac gI, Phl pI and Poa pI.
